

The website

Hobbies

Drawing

I used to spend hours filling **sketchbooks** with drawings of animals and imaginary creatures.

I remember once drawing an entire *zoo map* on a single piece of paper — every animal had its own enclosure and a little sign.

Riding My Bike

Every afternoon after school, I would race my bike around the **neighbourhood** until it got dark.

I once attempted a *daring jump* over a ramp my friend built from bricks and a plank of wood — it did not go as planned.

Toys

LEGO

I could spend an **entire weekend** building elaborate LEGO cities complete with roads, houses, and tiny people.

My proudest creation was a *massive spaceship* so large it took up half the living room floor, much to my parents' frustration.

Yo-Yo

I practised yo-yo tricks **relentlessly** until I could do "Walk the Dog" without even looking down.

I once entered a *playground competition* and came second — the winner could do tricks I still don't understand to this day.

This is the resume

NCV IT LEVEL 4 GRADUATE

Monde Shaun Masoka

// building and troubleshooting systems, one component at a time

01 — ABOUT

Who I am

I'm an NCV IT graduate from False Bay College, with a solid base in programming, networking, hardware, and multimedia. Over three years of study, I've moved from the basics of computer assembly right up to building small software systems and designing databases. I like understanding how something works underneath, not just how to use it.

Most of what I know comes from hands-on projects: writing a small web application in JavaScript, setting up and securing a wireless network, assembling a computer from raw parts, and mapping out a database with UML diagrams before building it in SQL. I've also worked with graphics, video, and audio editing, so I can bring a creative side to a technical problem when needed.

What drives me is problem-solving — finding the reason something is broken and fixing it properly. I want to keep learning and grow into a role where I can apply IT skills to real challenges, whether that's in networking, software development, or support. This page will grow as I take on more projects.

Skills & competencies

PROGRAMMING & DEVELOPMENT

VB.NET Java Debugging

Testing

NETWORKING & DATA COMMS

LAN/WAN setup

IP addressing

Troubleshooting

Security principles

HARDWARE & SOFTWARE

OS installation

Maintenance

Troubleshooting

SYSTEMS ANALYSIS & DESIGN

UML diagrams

Database design

Process modelling

MULTIMEDIA & CONTENT CREATION

Graphic design

Video/audio editing

Animation

ELECTRONICS & IT SUPPORT

Basic circuit design

IT service management

SOFT SKILLS

Problem-solving & critical thinking

Communication & technical writing

Teamwork & collaboration

Time management & organisation

Adaptability & continuous learning

03 — EDUCATION

Education & certifications

○ National Certificate in Information Technology — NQF Level 2

False Bay College · 2022

○ National Certificate in Information Technology — NQF Level 3

False Bay College · 2023

○ National Certificate in Information Technology — NQF Level 4

False Bay College · 2024

Education & certifications

○ **National Certificate in Information Technology — NQF Level 2**

False Bay College · 2022

○ **National Certificate in Information Technology — NQF Level 3**

False Bay College · 2023

○ **National Certificate in Information Technology — NQF Level 4**

False Bay College · 2024

CompTIA IT
Fundamentals (ITF+)

Cisco CCNA (Basic
Networking)

Microsoft Office
Specialist

Cybersecurity Basics

Academic projects

I'm early in my career, so my hands-on experience so far comes from applied coursework projects rather than paid roles — each one mirrors a real IT task from start to finish.

LEVEL 4

Software Development Project

- Built a small web application using JavaScript
- Implemented basic database functions and user authentication
- Debugged and tested the app for performance improvements

LEVEL 3-4

Networking Setup & Configuration

- Designed and configured a small network with routers, switches, and IP addressing
- Set up and secured a wireless network with encryption protocols
- Troubleshoot common network issues and improved connectivity

LEVEL 2-3

Computer Assembly & Maintenance

- Assembled a computer from components, installed OS and drivers
- Performed hardware troubleshooting and basic system upgrades
- Documented system maintenance procedures for efficiency

LEVEL 4

Database & Systems Design

- Created UML diagrams and process models for a system project
- Designed and implemented a small database system using SQL
- Developed queries and reports for data management

LEVEL 2-3

Multimedia Content Creation

- Designed and edited graphics, animations, and interactive media
- Used industry-standard tools for video/audio editing
- Created a multimedia project for digital marketing / education
